

Fertilisers Efficiency Enhancers welcome the adoption of EU Fertiliser Action Plan

Brussels, 20 May 2026 – Fertilisers Efficiency Enhancers, a sector group of Cefic, welcomes the Commission’s Communication “[Fertiliser Action Plan: Partnership for ensuring the availability, affordability and strategic autonomy of home-grown EU fertilisers](#)”, considering it as a positive step towards a future-proof European fertilisers market.

Nitrogen stabilisers are existing CE-marked technologies that provide a safe and cost-effective way to mitigate several challenges highlighted in the chapter 4.2.6 of the Fertiliser Action Plan, including the recovery of nitrogen losses.

There is a clear need to improve the efficiency of nitrogen fertilisers, notably by increasing Nitrogen Use Efficiency (NUE) through reduced nitrogen losses and, consequently, a lower CO₂ footprint. Nitrogen stabilisers are a scientifically proven and easy-to-implement solution to enhance NUE, alongside other measures such as the 4R approach, remote sensing tools, and digitalisation.

With stabilised nitrogen fertilisers, it is possible to achieve the same yield as with untreated fertilisers while using lower nitrogen quantities and reducing the overall CO₂ footprint.

Fertilisers Efficiency Enhancers is ready to contribute to develop detailed measures and to implement such measures together with relevant stakeholders.
